- Symmetry Dance Studio

Through their events, YouthHack makes technology more accessible to everyone whether or not they have experience. I believe technology is the key to developing the youth; it acts as an accelerator of creation, bringing their ideas to life. As a member of the core team, I can help achieve this goal, so that anyone gets a chance to experience technology; education should not be a barrier.

So far, the project I worked on the longest has been my own personal website (complete with portfolio and blog), a requirement for school. It wasn't necessary to build it from scratch, but it's what I did in order to challenge myself. As a perfectionist, it took me multiple nights just to achieve simple functions (such as a collapsible navigation bar), causing me much stress; however, once it was completed, the proud feeling of "Oh, I did this all by myself!" made all the hassle so worth it.
